

Offline System – Only 4G on Android.
We'd like to view voltage, charge,
current statistics in the
dwelling on the Android.

VictronConnect sees Cerbo GX from
dwelling when connected to AP1

Bluetooth and Cerbo GX Wifi do not reach dwelling.

We can walk to the Cerbo GX, hot-spot in and see everything VRM.

Wifi bridge (AP1) won't 'include' Internet hot-spot from Android
or allow us to use hot-spot to establish AP1 network.

Don't want to pay for satellite or 4G just to view battery
charge and generation details.
